

# TABLE OF CONTENTS

ANNUAL REPORT 2018/19

2 Foreword

4 Table of contents

## Fraunhofer IKTS in profile

6 Portrait

8 Core competencies

10 Organizational chart

12 Fraunhofer IKTS in figures

15 Board of trustees

16 The Fraunhofer-Gesellschaft

## 17 Retrospective

## 22 Highlights from our business divisions

### Materials and Processes

24 Ultra-thin transparent ceramics for scratch-resistant display covers

25 Extruded components made of high-density silicon carbide (SSiC)

26 Hybrid processes: taking advantage from manufacturing methods

27 Industry-oriented continuous manufacturing of ceramic foam

28 Inks and pastes for functional layers

### Mechanical and Automotive Engineering

30 Acoustic emission testing on composite structures for damage detection

31 Ductile 3D ceramic armoring for new protection concepts – DuktAr

32 Design, manufacture, and reliability testing of ceramic springs

33 Universal cognitive user interface for device control

34 Ultrasound test system of tension-proof crimp connectors on catenaries

### Electronics and Microsystems

35 Finite element simulation of chip molding compounds based on nano-XCT data

36 Single-fiber transducers for 3D-ultrasound-computer tomography (USCT)

37 Diode laser array for the post-processing of inkjet-printed layers

38 Cold sintering – new ways to manufacture and integrate functional ceramics

### Energy

---

- 39 A world's first: largest existing NaNiCl<sub>2</sub> cells in cerenergy®-battery module
- 40 Gas-tight joining of ceramic heat exchanger made of silicon carbide
- 41 Thin-film photovoltaics on technical textiles – PhotoTex
- 42 In-situ characterization of MCFC cathodes through impedance spectroscopy
- 43 EMBATT – bipolar lithium-ion battery for safe driving with great range

### Environmental and Process Engineering

---

- 44 Largest membrane plant worldwide for high-purity oxygen production
- 45 Efficient and wear-resistant stirrers for biogas plants
- 46 Floatable metal-ceramic composites remove pharmaceuticals from water
- 47 Dewatering of supercritical mixtures with ceramic membranes
- 48 CO<sub>2</sub>-reduced steelmaking via electrolysis-based direct reduction

### Bio- and Medical Technology

---

- 50 Non-contact determination of biomechanics of the eye through simulations
- 51 Translucent ceramics – hydrothermally stable and wear-resistant
- 52 Titanium oxynitride stent coatings with long-term biostability
- 53 Analysis of cell attachment and cell spreading on silicon nitride

### Optics

---

- 54 Optical coherence tomography monitoring of selective laser melting

### Materials and Process Analysis

---

- 55 Hot hardness testing of thermally stressed hardmetal tools
- 56 Modeling of the material behavior of components by 3D structural analysis
- 57 TEM – a versatile technique for studying emerging materials
- 58 A better understanding of ceramic component surfaces
- 59 Bulk behavior – process analysis and complex characterization

### 60 Cooperation in groups, alliances and networks

---

### 67 Names, dates, events

---

- 68 Events and trade fairs in 2019
- 70 How to reach us
